

OGP

Global standards used locally worldwide

List of ISO TC67 standards and their status with API, CEN and various other standards developing organisations

Report No. 4210
Revision - August 2011

Publications

Global experience

The International Association of Oil & Gas Producers has access to a wealth of technical knowledge and experience with its members operating around the world in many different terrains. We collate and distil this valuable knowledge for the industry to use as guidelines for good practice by individual members.

Consistent high quality database and guidelines

Our overall aim is to ensure a consistent approach to training, management and best practice throughout the world.

The oil and gas exploration and production industry recognises the need to develop consistent databases and records in certain fields. The OGP's members are encouraged to use the guidelines as a starting point for their operations or to supplement their own policies and regulations which may apply locally.

Internationally recognised source of industry information

Many of our guidelines have been recognised and used by international authorities and safety and environmental bodies. Requests come from governments and non-government organisations around the world as well as from non-member companies.

Disclaimer

Whilst every effort has been made to ensure the accuracy of the information contained in this publication, neither the OGP nor any of its members past present or future warrants its accuracy or will, regardless of its or their negligence, assume liability for any foreseeable or unforeseeable use made thereof, which liability is hereby excluded. Consequently, such use is at the recipient's own risk on the basis that any use by the recipient constitutes agreement to the terms of this disclaimer. The recipient is obliged to inform any subsequent recipient of such terms.

This document may provide guidance supplemental to the requirements of local legislation. Nothing herein, however, is intended to replace, amend, supersede or otherwise depart from such requirements. In the event of any conflict or contradiction between the provisions of this document and local legislation, applicable laws shall prevail.

Global standards used locally worldwide

Report № 4210

Revision – August 2011

Acknowledgements

This report was compiled by the OGP Standards Committee

Presentation of the list

The vision of the petroleum, petrochemical and natural gas industries standards effort in ISO Technical Committee 67 is *global standards used locally worldwide*. This vision is also reflected by OGP Report № 381: *Position paper on the development and use of international standards*. The purpose of the following list is to show where we are in this vision, i.e. which countries have adopted the ISO/TC67 standards at the end of 2010. The report will be revised from time to time to show the further steps of the standards development and adoption process.

ISO title and ISO column

The basis of this OGP report is the complete list of ISO TC 67 published standards including joint standards developed together with ISO/TC 60 SC2, ISO/TC 115 SC3, ISO/TC 118 SC1, ISO/TC 153 SC1 & ISO/TC 192.

ABNT – Brazil column

This column shows which standards are adopted and published by ABNT as NBR, national Brazilian standards and which are taken into Brazilian use without adoption. In addition to the adopted standards, Brazil indicates some for which adoption is under preparation (*in green*).

API – USA column

In this column are indicated the API standards which have already been re-adopted from the ISO standards. Some state "MOD"; this indicates that there have been some technical changes from the ISO document, whilst those marked "IDT" are identical adoptions.

Also note that all national adoptions are, by definition, American National Standards (ANSI).

Some of the indicated documents in the API column are issued by another SDO (e.g. NACE).

CSA - Canada column

While CSA has not adopted the other ISO standards in the list into Canada's national standards system, that doesn't necessarily mean that they are not in use.

CEN – Europe column

It is important to note that the EN standards are also published as national standards in all the 30 European countries members of CEN within 6 months of the publication as EN.

The standards mentioned are technically identical to the corresponding ISO ones (these standards are numbered EN ISO XXXXX); they were accepted in Europe either through the parallel vote procedure or by Unique Acceptance Procedure within the Vienna Agreement between CEN and ISO (ISO leader). All the documents are part of the CEN/TC12 work programme except some which depend upon CEN/TC 69 and some upon ECISS/TC 110. Some of them (developed by ISO/TC 67/SC2) have a different number in ISO and in CEN because, if the technical content is identical, their scope in Europe excludes the gas infrastructure industries; they nevertheless have in their title the reference to the ISO initial standards with the indication: (modified).

Note that in the EN document the main body of the standard is identical to the ISO one, with a cover page added on the ISO standard.

GB – China column:

The Chinese number of the ISO adopted standard is different from the ISO one.

GOST R – Russia

Russia has added to the list the plans where adoption of other ISO standards are in progress (*in green*).

ST RK – Kazakhstan column

Kazakhstan has adopted the ISO standards in three different ways: Identical (IDT), Modified (MOD) and a small number of Not equivalent (NEQ).

GSO – Gulf column

This column concerns an additional regional group of countries that are adopting (identical or modified) ISO/TC67 standards. GSO is the Gulf Standardization Organization for the Cooperation Council for the Arab States of the Gulf. GSO currently includes 7 countries: Bahrain, Kuwait, Oman , Qatar , Saudi Arabia , United Arab Emirates and Yemen.

Once a standard is adopted by GSO, it is then automatically adopted by the member countries of the Gulf Standards Organization, as is the case in CEN.

Note:

The goal for the revision of this report has been to provide information to be correct by the end of 2010. For up to date information, please consult with the public websites of each of the standards development organisations mentioned herein.

This report focuses on ISO/TC67 standards only. There are many other API, EN, ISO, GOST and GSO etc. standards available for use by the oil & gas industries. References are made to public websites and:

- OGP Report No. 362 *Catalogue of international standards used in the petroleum and natural gas industries*
- OGP Report No. 426 *Regulators' use of standards*
- OGP Report No. 450 *Benchmarking on the use of internal technical specifications and external standards by some oil & gas companies*
